Practical Exercise – Back End Developer

Please implement a solution in code to match the following business requirement.

- Build the solution with **ASP.Net MVC**
- Database implementation is not required. Data source will be given as json files.

Business Requirement:

As a clinic supervisor, I need a way to generate a financial report to analyse profitability of my practitioners on each month.

* All appointment and practitioner data will be given in the JSON format, please find the attached JSON files

Report criteria:

- Filter practitioners to report on
- Date range

Report output:

1. for each practitioner, display cost and revenue per month within the given date range
2. Click each practitioner's name in the generated report (output 1), it will show all the appointment data list in the UI for current practitioner within the selected date range.
